

WYANDOTTE CREEK SUBBASIN

SUSTAINABLE GROUNDWATER MANAGEMENT ACT (SGMA) 101

SGMA OVERVIEW

Groundwater is increasingly relied upon to provide our drinking water, nourish our agriculture, and support our environment. The Sustainable Groundwater Management Act (SGMA), passed in the fall of 2014, establishes a new structure for managing groundwater resources in California. Groundwater basins and subbasins are defined in the Department of Water Resources (DWR) Bulletin 118 document. SGMA requires Groundwater Sustainability Agencies (GSAs) to manage groundwater at the local level through the development and implementation of Groundwater Sustainability Plans (GSPs). The GSPs must ensure sustainable conditions by 2042 while avoiding six distinct undesirable results. The decisions about sustainability will be made locally through public involvement. Sustainability under SGMA is defined as avoiding the following Undesirable Results:
